

Project Overview:

Problem we need solved: We are working on developing a Media Search Engine to process media data to create media results reports software for Television, Radio, Newspapers, Magazines, Social Media, Blogs, and Web Streaming Media to not miss data. To help people become media aware and media informed with Media Analytics. Work on Administration to keep track of computers and software hardware on systems with security hardware problems and error messages data missed with Administration Analytics.

ENVIRONMENT TO WORK ON THE SOFTWARE

Henry and I will set up an environment for you to remote into the system to work on the software.

The software you work on should have notes and put up say once a week on DigiClips Henry's github.

On the local system the software is tested to fix problems, do a production build and then put up remotely on AWS Amazon Lightsail for final presentation.

PICTURE OF OUR COMPUTER SYSTEM

<http://www.digiclipinc.com/DigiClipsPictureOfComputers.jpg>

SOFTWARE TO BE FAMILIAR WITH

Software to be familiar with would be Ubuntu-Mate 22.04, C, nodejs, react, angular 15, typescript, mysql relational database, docker container with AI Artificial Intelligence and security.

WEEKLY MEETINGS

We have weekly meetings and both Henry and I can be reached 24/7 via telephone, email and text messages.

Henry Email hbremers@gmail.com Phone: (303) 249-4676

Bob Email bobshapiro40@gmail.com Phone: (303) 926-0334 Cell Phone: (720) 280-5335
