Email: _________________________

Course Description

In this course, students will gain working experience in an area of computer science relevant to the student’s research interests. The internship experience must be approved in advance. Acceptable internships must entail significant, substantive computer science. The student is to be registered for this course while working.

Prerequisites

Approval from instructor in advance

Goals and Key Learning Objectives

The goal of the course is for students to have work experience in non-elementary computer science.

The requirement for completion of the course is a report prepared by the student and an email from the supervisor (internship manager) stating that they read the report and approve. Report should contain a problem statement, methods/approach used, deliverables and skills gained. The report should not contain any proprietary or confidential information.

Grading

Students are required to submit a final report to the instructor, that summarizes the internship experience. The report should include a problem statement, approaches/method used, deliverable, and major skills gained (as much as the proprietary policies of the employer allow). The grade in this class (pass or fail only) will be based on the final written report.
